information
about breast
cancer screening.

Breast cancer is the #1 cause of cancer death among Black women.¹

You do not have to have a family history of the disease to get breast cancer. In fact, in 85% of breast cancer cases, **there is no family history.**²

- Black women are more likely to have dense breast tissue than other women, which is associated with increased risk for breast cancer.³⁻⁵
- The American College of Radiology notes that all women, especially Black women, should be **evaluated for breast cancer risk no later than age 30**, so that those at a higher risk can be identified and can benefit from screening.⁶

Getting a mammogram may save your life.⁷

According to the American Cancer Society, regular screening is the most reliable way to **catch breast cancer early.**⁴

- **99%** of women who get **diagnosed** with early-stage breast cancer (when cancer is only in the breast) are **alive 5 years after** their diagnosis.^{8,9}

Make your breast health a priority.
